4		4
5	List of contributors . . . . .	ix
6	Foreword . . . . .	xiii
7	Preface . . . . .	xv
8		8
9		9
10	<b>Chapter 1 Graphene-based hyperbolic metamaterials with nonlocal</b>	10
11	<b>quantum gain . . . . .</b>	<b>1</b>
12	Illya I. Tarasenko, Tatjana Gric, Ortwin Hess	12
13		13
14	1.1 Introduction . . . . .	2
15	1.2 Theoretical preliminaries . . . . .	3
16	1.3 Graphene single-sheet plasmon dispersion . . . . .	10
17	1.4 Plasmons in finite graphene–dielectric stacks . . . . .	15
18	1.5 Analytic calculation of plasmonic region boundaries . . . . .	19
19	1.6 Infinite structures . . . . .	24
20	1.7 Finite structures . . . . .	28
21	1.8 Summary and outlook . . . . .	39
22	References . . . . .	41
23		26
24		27
25	<b>Chapter 2 Regulating spin dynamics of graphene flakes . . . . .</b>	<b>45</b>
26	V.I. Yukalov, V.K. Henner, T.S. Belozeroва	28
27		29
28	2.1 Traditional approaches . . . . .	45
29	2.2 Magnetic defects coupled to a resonance electric circuit . . . . .	46
30	2.3 Equations of motion for spin variables . . . . .	50
31	2.4 Defects at zigzag edges of graphene flakes . . . . .	50
32	2.5 Conclusion . . . . .	53
33	Acknowledgment . . . . .	54
34	References . . . . .	54
35		36
36		37
37		38
38		39
39		40
40		41
41	<b>Chapter 3 Design of bandgaps in photonic crystals . . . . .</b>	<b>57</b>
42	Robert Lipton, Robert Viator Jr.	42
43		43
44	3.1 Introduction . . . . .	57
45	3.2 Electrostatic resonances and representation formulas . . . . .	65
46		45
		46

1	3.3	Neumann spectrum for complex coupling constant . . . . .	72	1
2	3.4	Series representation of Neumann eigenvalues . . . . .	73	2
3	3.5	Series representation of Bloch eigenvalues . . . . .	76	3
4	3.6	Neuman and Bloch spectrum in the high contrast limit . . . . .	82	4
5	3.7	Radius of convergence and separation of spectra . . . . .	85	5
6	3.8	Convergence radius for general inclusions . . . . .	89	6
7	3.9	Convergence radius for randomly placed disks . . . . .	90	7
8	3.10	Explicit bounds on location of band gaps and pass bands . . . . .	93	8
9	3.11	Reciprocal relation and its applications . . . . .	97	9
10		References . . . . .	99	10
11				11
12				12
13				13
14				14
15				15
16	<b>Chapter 4</b>	<b>Multiperiodic one-dimensional photonic crystals . . . . .</b>	<b>103</b>	16
17		Nataliya Dadoenkova, Yuliya Dadoenkova, Ivan Panyaev, Dmitry		17
18		Sannikov, Igor Lyubchanskii		18
19				19
20	4.1	Introduction . . . . .	103	20
21	4.2	Theoretical analysis for ternary and biperiodic photonic crystals	105	21
22	4.3	Numerical results and discussion for biperiodic photonic crystals	108	22
23	4.4	Quaternary and three-periodic dielectric photonic crystals . . . . .	114	23
24		Conclusions . . . . .	120	24
25		Acknowledgments . . . . .	122	25
26		References . . . . .	122	26
27				27
28				28
29				29
30				30
31	<b>Chapter 5</b>	<b>Absorption and reflection of light by nanocomposite films . .</b>	<b>125</b>	31
32		Valeri Lozovski, Margarita Razumova		32
33				33
34	5.1	Introduction . . . . .	125	34
35	5.2	Linear response of thin nanocomposite films . . . . .	127	35
36	5.3	Optical absorption . . . . .	135	36
37	5.4	Light reflectivity . . . . .	137	37
38	5.5	Models for effective susceptibilities of inclusions . . . . .	139	38
39	5.6	Numerical calculations for the thin Au/Teflon films with the		39
40		Gauss distributions of inclusions across the film thickness . . . . .	140	40
41	5.7	Summary . . . . .	145	41
42		References . . . . .	146	42

1	<b>Chapter 6 Lead-free ceramics based on potassium-bismuth titanate</b>	1
2	<b><math>K_{0.5}Bi_{0.5}TiO_3</math> .....</b>	<b>149</b>
3	Piotr Czaja, Jan Suchanicz, Marcin Wąs, Jacek Michniowski,	
4	Kamila Kluczevska-Chmielarz, Mariusz Sokołowski	
5		
6	6.1 Introduction.....	149
7	6.2 $Na_{0.5}Bi_{0.5}TiO_3$ and $K_{0.5}Bi_{0.5}TiO_3$ .....	151
8	6.3 Properties of lead-free ceramics KBT.....	152
9	6.4 Conclusions.....	158
10	References.....	159
11		
12		
13	<b>Chapter 7 Nonlocal effects in nanolayered hyperbolic metamaterials .</b>	<b>163</b>
14	S. Cortés-López, F. Pérez-Rodríguez	
15		
16	7.1 Introduction.....	163
17	7.2 Nonlocal homogenization approach.....	166
18	7.3 Homogenization of a metal-dielectric superlattice.....	168
19	7.4 Calculation of optical spectra: method of expansion into bulk	
20	modes.....	174
21	7.5 Discussion.....	185
22	7.6 Conclusion.....	187
23	Acknowledgments.....	187
24	References.....	188
25		
26		
27		
28		
29	<b>Chapter 8 Conductivity and elasticity of graphene-type composites ...</b>	<b>193</b>
30	Piotr Drygaś, Leonid A. Filshtinsky, Simon Gluzman, Vladimir Mityushev	
31		
32	8.1 Introduction.....	193
33	8.2 Basics of neoclassic theory of composites.....	200
34	8.3 Conducting 2D structures with vacancies.....	209
35	8.4 Critical behavior.....	215
36	8.5 Elastic constants of the nanorods.....	221
37	8.6 Discussion.....	226
38	References.....	228
39		
40		
41		
42	<b>Chapter 9 Application of integral equations to simulating local fields</b>	
43	<b>in carbon nanotube reinforced composites.....</b>	<b>233</b>
44	Mohamed M.S. Nasser, El Mostafa Kalmoun	
45		
46		

1	9.1	Introduction.....	233	1
2	9.2	Conformally mapping the physical domain.....	236	2
3	9.3	Computing the temperature distribution.....	239	3
4	9.4	Computing the heat flux.....	242	4
5	9.5	Examples.....	243	5
6		Acknowledgment.....	247	6
7		References.....	247	7
8				8
9				9
10				10
11	<b>Chapter 10</b>	<b>Field induced by a flat graphene structure.....</b>	<b>249</b>	11
12		Vladimir Mityushev, Wojciech Nawalaniec		12
13				13
14	10.1	Introduction.....	249	14
15	10.2	Modified Dirichlet problem.....	250	15
16	10.3	Flat hexagonal array of spheres under plane.....	254	16
17	10.4	Flat array without plane.....	256	17
18	10.5	Flat array with plane.....	258	18
19	10.6	Conclusion and discussion.....	263	19
20		References.....	266	20
21				21
22				22
23				23
24	<b>Chapter 11</b>	<b>Modeling, simulations, and properties of thin films near</b>		24
25		<b>graphene and its derivatives.....</b>	<b>269</b>	25
26		Wojciech Gwizdała, Roman Czapla, Wojciech Nawalaniec		26
27				27
28	11.1	Introduction.....	269	28
29	11.2	One-atom-thick carbon-based materials.....	270	29
30	11.3	Structure and basic properties of nematic liquid crystals.....	273	30
31	11.4	Computer simulations: molecular dynamics technique.....	275	31
32	11.5	Molecular modeling and force field potentials.....	279	32
33	11.6	Molecular order parameters and methods of their determination.....	283	33
34	11.7	Simulation details and model of ensemble.....	285	34
35	11.8	Structural sums.....	287	35
36	11.9	Conclusions.....	292	36
37		References.....	292	37
38				38
39				39
40				40
